

All generators desiring to remove their waste must submit a waste removal plan to EPA for approval. All removal activities must be conducted in compliance with existing EPA and Nebraska Department of Environmental Control (NDEC) hazardous waste regulations. If you have already made arrangements through a contractor to remove your waste, please provide EPA with this information.

EPA appreciates your assistance in alleviating this potentially hazardous environmental situation. We would appreciate knowing of your intentions regarding disposition of your waste as soon as possible. Any questions of a technical nature should be directed to Wayne Kaiser of my staff at 816/374-7133. Any questions of a legal nature should be directed to Ms. Ellen Goldman, EPA Attorney, 816/374-2069.

You should be advised that if EPA must expend any federal monies for waste removal it will seek to recover the cost of such activities from all responsible parties, which may include any generators, at a later date.

Sincerely yours,

David A. Wagoner  
Director, Air and Waste Management Division

Dear Mr. Trumbold:

The United States Environmental Protection Agency (EPA), Region VII, recently denied a Part B Permit Application submitted by Willis Pyrolizer Company. The permit denial will have the effect of terminating this facility's Interim Status under which Willis Pyrolizer Company operated as a hazardous waste storage and disposal facility. Consequently, Willis Pyrolizer Company will no longer be allowed to accept, treat, store or dispose of any hazardous waste on-site. Furthermore, all hazardous waste presently at the facility must be removed and the facility closed in accordance with 40 C.F.R., Part 265, Subpart G.

EPA has, after recent on-site investigations, determined that hazardous waste at the facility is stored in such quantity and under such conditions that the site presents an imminent and substantial endangerment to health and/or the environment. EPA is pursuing legal remedies to require Willis Pyrolizer Company to alleviate this condition in an expeditious manner. Such remedies will include requiring complete removal of all hazardous waste at the facility.

While EPA considers Willis Pyrolizer Company to be a responsible and liable party for removal of hazardous waste at the site, it is our understanding that most generators with waste at the site are voluntarily agreeing to arrange for the removal of their waste to other approved Resource Conservation and Recovery Act (RCRA) facilities.

Information available to EPA indicates that hazardous waste generated by Reid Supply may be presently stored at the Willis Pyrolizer Company. If so, that waste will have to be removed. EPA desires to know what plans Reid Supply has regarding removal of this hazardous waste from Willis Pyrolizer Company.
